

To qualify for the Rex Baker Super 40 of North American Big Game,™ you MUST have completed the Super Slam of North American Big Game® and legally taken free-range a minimum of 40 of the listed species listed below. For the Rex Baker Super 40, there are 45 species/subspecies, and it includes all the animals needed for the Super Slam. Whereas the Super Slam list

consolidates the Arctic Island caribou and the Central Canada barren ground caribou, the Rex Baker Super 40 does not; the Rocky Mountain and desert mule deer; the Western and Eastern Canada moose; the grizzly bear and the barren ground grizzly bear; the barren ground muskox and Greenland muskox—the Rex Baker Super 40 lists each subspecies separately. A member needs only one of the two of that particular category. To achieve the Rex Baker Super 50, one must complete the Rex Baker Super 40 and take any additional species on this list. Ten additional species have been added that count ONLY towards the Rex Baker Super 50 list: ABC Islands Bear, Anticosti Whitetail, Bobcat, Columbia Whitetail, Greenland Caribou, Mexican Whitetail, Vancouver Island Black Bear, and three additional Desert Bighorn Sheep.
